

Workshop 1: Strengthening the Scientific Knowledge Base for Career Guidance

KEY MESSAGES

All groups seem to agree that policymakers need to find structures and systems to fund unbiased and objective research.

Among other things, the groups talk about the fact that whoever orders the research also dictates the results of the research.

The groups' discussions can also be summed up by talking about the importance of collaboration between decision-makers, research and professionals. All these three players must be in close dialogue with each other to build the conditions for scientific and professional guidance.

This also needs to be internationalized by making it easier to translate scientific research, so that we can learn from each other.
